

More Control off site backup solution

Data fort is a secure offsite data backup via the Internet.

More convenient and reliable than a Tape or Disk backup, this service provides enterprise level security for small and medium sized companies.

There is no limit to the number of programs or machines you can backup.

- Machine software
- HMI
- Desktop PC's
- Laptops
- Servers
- Networked PC's and Servers

Not only can you or we save you software on this system but it could also be used to backup your factory computers so other important data is never lost.

The software simply installs on one or more machines, after a little configuration you have a backup service that does not depend on someone manually starting it off, or changing a tape.

You can have as many PC's backing up to the same account with DataFort as you need, you will only pay for the storage space that you use, pricing can be found bellow.

Data Transmission

DataFort uses 256-bit military grade encryption. The same standard approved for internal use by the US federal government. Your data is only transmitted across the Internet after it has been encrypted.

Individual encryption keys. Each client creates their own encryption key thereby assuring they are the only ones to have access to their data.

Confirmation facility guarantees the successful backup of each file. If for any reason a file cannot be accessed for archive it is listed in the failed area on the client services

Tel 01908 364555

Fax 01908 364 511

portion of the web site. Incomplete backup transmissions set off a flashing icon in the client's system tray.

Hardware

High quality RAID mirrored disk servers are used as the archive servers.

Hot Standby Servers. Are employed for every five archive servers in operation. Should a server develop a problem the disks will be swapped into a new machine without an interruption of service.

Offsite Data Backup Cost Of Service

The software for the Data Backup Service is **FREE**, and you can run as many copies as you require. The only charges are for the data that you store offsite.
